CERTIFICATIONS - <https://www.credly.com/users/parin-dalwadi>

- AWS Certified Developer-Associate ● Microsoft Certified Azure Fundamentals ● Selenium Fundamentals
- IBM watsonx Essentials ● IBM Generative AI Foundations ● watsonx Code Assistant Sales Foundation

TECHNICAL SKILLS

Back-End Languages: JAVA, Python, NodeJS
Front-End Languages: HTML, CSS, JavaScript, JQuery, Bootstrap, AJAX
Technologies : Version One Agility Tool, Gitlab CI, Red Hat OpenShift(ROSA), AWS, Kafka, Kubernetes
Native AWS: CloudFormation, Eventbridge, Code Pipeline, API Gateway, Route53, ELB, S3, EC2, EMR, Lambda, Step Function, AWS Batch, DynamoDB, Athena, VPC, CloudWatch, AWS CDK, MSK
API Development: SOA, REST, FASTAPI, Quarkus, Spring Boot, JUnit, Mockito

WORK EXPERIENCE

Senior Cloud Developer at IBM

Sep'21 – Jul'24

New York, New York, USA

- Delta Airlines Cloud Transformation (ZULU) Large Scale Company-wide Project - Lead an 11 People Team to Architect and Deploy 10 SOA Services into Production on AWS Cloud as a Team Lead - Senior Developer with an overall impact of 15 Million \$/year.
- Received Multiple Appreciations from Upper Management for efficiently wearing different Technical Hats of Team Lead - Sr. Python Developer, DevOps Architect, Sr. Java Developer, going beyond to also parallelly function as Scrum Master and Design Architect.

DELTA REFERENCE DATA MODERNIZATION Project - Team Lead - Senior Python Developer

Locations API | Carrier API Equipments API | Amenities API Services (SOAToRESTAPI, GitLab CI/CD, AWS)

- Lead and Designed a Distributed System Architecture for Org Level Impact APIs with 12 Endpoints and successfully managed an 11 people Core-Team to deliver Upper Management Goals One Sprint ahead of time.
- Reduced billing costs by \$100K/month and latency of the Delta Services by from 15 sec to 10 ms allowing Consumers to search for various Locations with minimum flight connection times alongside identifying Class of Service and Seat Selection.
- Designed Scalable Service Architecture for Global Airlines Services and performed Data Cleanup of 20 TB redundant data from DynamoDB.

DELTA CONTAINERIZATION Project - AWS DevOps Architect

ET Buddy | DLV-Air-Availability | DLV-Destination Services (ROSA, Tekton, AWS, JAVA)

- Performed DevOps Automation and Productionized AWS Cloud services which help customers to select and book destinations on the Delta Airlines website to achieve a 99.99% failure tolerant system.
- Deployed and Performed Containerization of REST APIs and Batch Job Services using RedHat Openshift Architecture(ROSA), Tekton pipelines and AWS Cloud by creating CI/CD and Infra Pipelines in Dev, SI and Production Environments at a Global Scale.

DELTA AUTOMATION FOR APP MIGRATION Project - Senior FullStack Cloud Developer

Circuit Breaker Reference Service (AWS, Python, NodeJS, Java)

- Achieved Cost Reduction of 50K \$/year by leveraging Automation and GenAI for optimizing Agility and Speed to market.
- Ramped Up Quickly on the complex Circuit Breaker Design Pattern and NodeJS to deliver a functional service to optimize the API calls using the FailFast approach achieving high availability by having a multi-region deployment and resiliency of 99.99999%.

DELTA MIGRATION Project - Senior Java Developer

Automated Distribution Engine - ADE | Narrow Body Rules – NBG Services (Java Spring Boot, Quarkus, Mockito, Python, TypeScript)

- Owned and drove the API Development for Global Footprint Airline Services from Swagger definitions using Quarkus Framework, DynamoDB Enhanced Client using Data Modelling and Test Driven Development to improve data reading speed by 400%.

Software Development Engineer-I at Amazon.com Services, Inc.

Jul'19 – Aug'21

Seattle, Washington, USA

Image Based Classification Service (Python, TypeScript)

- Launched a Distributed System in 14 Markets Worldwide on Amazon.com for Image based Classification of catalog items and Optimized moving data storage from SageMaker to Amazon S3 achieving a memory cost reduction of \$100K/month.

Catalog Data Label Count and Presence Validation Service (Java, Scala, TypeScript)

- Designed and implemented an end-to-end service which checked the data quality of the items in the catalog based on the counts of the labels of the item's JSON. The service was instrumental in reducing the Applied Science team's load from Weeks of effort to a few Hours.
- The service's functionality proved instrumental in mitigating manual error prone processes and was utilized company wide in Amazon thus increasing the org revenue by 5 Million Dollars per year and reducing operational load by a factor of 10.

EDUCATIONAL QUALIFICATION

North Carolina State University, Raleigh, North Carolina, USA

Aug'17 – May'19

Master of Science in Computer Network Engineering

Vishwakarma Institute of Technology, Pune, Maharashtra, India

Aug'12 – May'16

Bachelors of Technology in Electronics and Tele-Communications Engineering
